

## Brain Diseases and Metalloproteins

This book describes the latest research on neurodegenerative disease and metal-binding proteins. It lays strong emphasis on biochemistry and cell biology. The diseases covered in the book include Parkinsons disease, Alzheimers disease, prion disease, and ALS. The chapters separately examine such issues as mechanisms of metal binding, metal-induced structural changes in proteins, alterations in cellular metal metabolism in disease, and attempts at a therapeutic approach based on protein metal binding.
