

The Handbook of Lighting Surveys and Audits

Complete with checklists and forms, this step-by-step guide tells everything the facilities management professional needs to know about conducting lighting surveys and audits in a commercial or industrial facility. Lighting audits are required when companies undertake lighting retrofits and related projects in order to improve their lighting systems. The best way to ensure maximum performance of the new systems, maximize return on investment, and prove energy savings (in order to qualify for financial assistance or meet government targets) is to start with a comprehensive lighting audit. Public and private incentives along with recent energy saving advances in lighting technology have motivated companies to turn to energy saving solutions. Written by one of the nations leading authorities on lighting and the education of lighting professionals, this practical handbook provides the auditor with the solid, useful information needed to accomplish accurate surveys and audits.
