

The process of Evolution of Walk of Human Bing

This paper considers the Process of Evolution of Walk of Human Bing. There are some hypothesis about this theme but not fixed yet. They showed environmental factors mainly such as Savanna-based theory, but I want to show the process of the evolution of walk of human. I start this consideration with a unique characteristic of human being comparing with other animals. That is we usually sleep on our back. And I unfold from it as fundamental factor to indirect factor and direct factor of erect bipedalism. These factors connect well and make good process and well explain Human erect bipedalism.
